AS

The keyword **AS** is used to assign an alias to the column or a table. It is inserted between the column name and the column alias or between the table name and the table alias.

Syntax

```
SELECT column_name" AS "column_alias"
FROM "table_name";
```

AS

The keyword **AS** is used to assign an alias to the column or a table. It is inserted between the column name and the column alias or between the table name and the table alias.

Example

SELECT Cust_id AS "Serial number", Customer_name as name, Age as Customer_age
FROM Customer ;
